

BATTERY CARE

To prevent battery shorting, leakage or rupture:

- Never dispose of batteries in fire, as they could explode.
- Do not attempt to recharge a battery unless the battery specifically is marked "rechargeable."
- Do not store batteries loosely or carry them loose in your pocket or purse – they can be shorted, leak or rupture due to contact with metal objects.
- Remove worn-out batteries from equipment immediately.
- Always keep batteries out of the reach of young children.
- Always replace all batteries at the same time. Mixing old and new batteries or mixing types (such as alkaline with zinc carbon) will reduce overall performance and could cause leakage or rupture.

Follow the easy battery care tips below to get the most out of your DURACELL batteries:

- Use the correct size and type of battery specified by the manufacturer of your device.
- Keep battery contact surfaces and battery compartment contacts clean by rubbing them with a clean pencil eraser or a rough cloth each time you replace batteries.
- Remove batteries from a device when it is not expected to be in use for several months.
- Remove batteries from equipment while it is being powered by household (AC) current.
