

INSTRUCTIONS:
Model:

Power Cord
BA-PC6

Caution:

- Read all instructions before installing.
- Make certain cord is not powered before installing.
- Use only with grounded outlets.
- Do not alter plug contacts or use adapters.
- All installation shall be in accordance with NEC and all local codes.

Cord and Plug Use:

1. Pry out the plastic cover concealing the connection port at the end of the fixture.
2. The power cord has one square shaped connector and two rounds to assure correct orientation into the fixture connection port.
3. Insert the end of the connector into the fixture.
4. Cord is supplied with a metal strain relief cover bracket. Slide the cover bracket over the connector.
5. Position the bracket so the hole in the bracket aligns with the hole in the fixture. Secure with screw provided.

Note: The total wattage of all connected fixtures should not exceed 700watts.
